

7485

THICK PAINT STRIPPER

Chemico 7485 was developed as a reduced VOC stripper that can remove paint that has built-up and started to air cure. This product is thick so the solvent doesn't evaporate into the air it continues to emulsify the paint until it is removed. This reduces your overall per use cost because the 7485 continues to work long after it is applied.

PRODUCT APPLICATION

- Use on vertical and horizontal surfaces with paint build-up
- Can also be used to remove adhesives

TECHNICAL DATA

- **Physical State:** Liquid
